rotating_cuboid

首先要把綠色框起來的地方改成自己 coppeliasim 的位置

```
File Edit Search View Tools Options Language Buffers Help
1 rotating_cuboid.py
2 import sim as vrep          #V-rep library
3 import os
4 import sys
5 import time                #used to keep track of time
6 import numpy as np         #array library
7 import cv2
8 import imutils
9 # 以多執行緒啟動 coppeliasim headless mode
10 import threading
11 import keyboard
12
13 # kill previous coppeliaSim
14 os.system("taskkill /IM coppeliaSim.exe /F")
15
16 -def start_copsim():
17     dir = os.getcwd()
18     os.system("Y:/CoppeliaSimEdu 4.3.0 rev3/coppeliaSim.exe -h " + dir + "/rotating_cuboid.ttt")
19     return "start copsim"
20
21 -def pause_copsim():
22     # 暫停執行緒
23     pill2kill.clear()
24     # 暫停模擬
25     vrep.simxPauseSimulation(clientID, vrep.simx_opmode_oneshot_wait)
26     return "pause copsim"
27
28 -def start():
29     pill2kill.set
30     # 啟動模擬
31     vrep.simxStartSimulation(clientID, vrep.simx_opmode_oneshot)
32     return "start simulation"
33
34 # 開啟 rotating_cuboid 場景
```

```
>pythonw -u "rotating_cuboid.py"
Setting up the camera system...
Camera setup successful.

再來就可以 Tools Go

就會跑出兩個攝影機

uarm_nx_tkinter_gui_control

先開啟視覺串流伺服器

要先開啟 coppeliasim 的模擬

再 Tools Go

再按 to connect

就可以試試看移動 UI 介面

網站上的會跟軟體內的同步
